

# CLIENT CASE STUDY

## Farm Service Elevator

### Who is Farm Service Elevator?

Farm Service Elevator is a commercial feed mill producing bulk feed for the poultry industry. The mill produces approximately 7,000 tons of feed per week, which is shipped out via bulk semis.

On a normal day FSE ships out approximately 55 truckloads between two loadout bays.

### Addressing the Issues

FSE was having multiple issues with their overhead doors and as a result these issues were creating compliance infractions with Safe Quality Feed (SQF).

#### ISSUES:

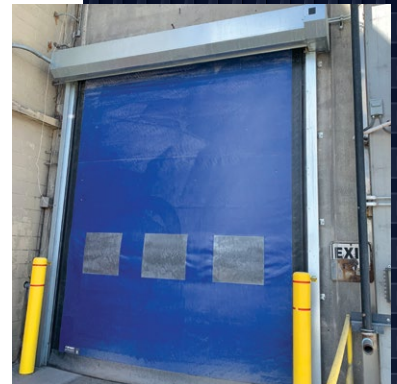

1. Birds inside their facility
2. Costly, ongoing repair issues
3. Inefficiencies

### D&DT Solutions

Dock & Door Tec assessed, recommended, supplied and installed exterior mounted Dynaco High-Speed Fabric Roll-Up Doors with safety devices and controls at the Farm Service Elevator facility in Willmar, MN.

#### SOLUTIONS:

1. The installation of new doors that travel much faster solved the problem with birds getting into the facility and reduced high maintenance costs associated with their previously installed sectional doors.
2. The new doors eliminated the need for truck drivers to close doors themselves.

Go to D&DT. They can help you solve any issues you may have with overhead doors. Their staff is great to work with and they are always available when you need them. D&DT has helped FSE overcome the obstacle of keeping birds out of the facility and also improving the efficiency of our loadout bays.”
