

CLIENT CASE STUDY

Main Street Designs

Who is Main Street Designs?

Main Street Designs is bringing communities together by designing state of the art banners, hardware, flags and decorations. Their pieces are formed by the expression of each individual town or event that is touched by one of their uniquely designed pieces. Honoring, celebrating and expressing are just a few things Main Street Designs does best.

Addressing the Issues

Main Street Designs sought Dock & Door Tec for two primary issues.

ISSUES:

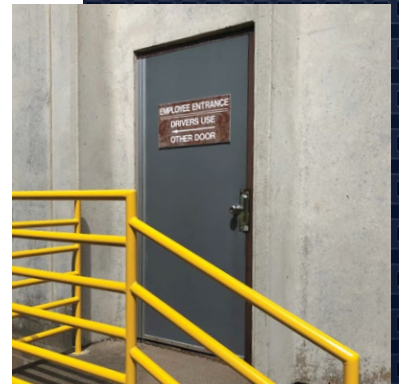

1. Darkness had overcome a back section of the facility making everyday operations in the area difficult.
2. A service man door suffered from wear and tear due to extensive use over the years.

D&DT Solutions

Both Main Street Designs and D&DT believe open communication on initiatives is key to growing successful partnerships which allowed D&DT to provide the right solutions.

SOLUTIONS:

1. Install a full view commercial door in the loading dock area allowing natural light into the space. The door made the interior space bright and accessible for day to day use while improving aesthetics.
Main Street Designs was impressed with the installation, the overall turn out and enjoy having light in the space.
2. A new replacement service hollow metal man door and frame were installed for optimum performance, security and dependability moving forward.
3. A continuous hinge was added to the door to ensure long-life, lower cost of ownership and withstand the rigors of high use.

Do not limit yourself, bring in a trusted advisor and see what the options are, what Dock & Door Tec provides might be a complete out of the box solution that works.”
