T5 Data Center

Who is T5 Data Center?

T5 Data Center is a client that helps other companies specialize in custom IT solutions for any customer or business.

Addressing the Issues

1. The issue was that the client's underground parking is only available to people that work in the building and the ramp is commonly mistaken for public parking due to its location in downtown Minneapolis.

2. The door at the bottom of the ramp needed to be replaced because they were closing prematurely on people entering parking garage.

D&DT Solutions

1. D&DT installed a parking arm at the top of the ramp for employees to scan their badges for the arm to lift the gate to proceed down the ramp.

2. The door was replaced with a rubber door that is more durable and creates a better seal.

3. New light sensors & camera system were installed so employees know when it is safe to enter the garage.

4. A new looping sensor system was installed further back from the door so cars would not have to pull so close to the door to enter & prevent the door from closing too soon on vehicles.

> " We recently had the pleasure of working with John, a sales representative who impressed me with his respectful and prompt responses. He was a pleasure to work with. Additionally, we were impressed with the door he installed - it was nicely made, strong, and durable. The motor was quiet and moved at a good pace for cars coming in. The controls were nicely laid out in the panel and responded quickly. Even the gate arm responded quickly, and it was tied into our existing loop detector under the concrete. Lastly, the lights on the gate arm and door were bright and could be seen in the middle of the day. The complete package was of quality design and lots of curb appeal. Overall, we were very pleased with the experience and highly recommend John and the product he installed." -Brian Lach, T5 Data Centers
