

CLIENT CASE STUDY

The Food Group

Who is The Food Group?

The Food Group is a nonprofit working at the intersection of equity and access to fresh, sustainable foods. From farming to distribution, we provide fresh food across MN and WI.

Addressing the Issues

1. **Drive-In Cooler:** Slow moving sectional doors had several mechanical doors and did not open and close fast enough to properly control the temperature difference between the ambient warehouse and refrigerated cooler.
2. **Staging Freezer Door:** Manual sliding freezer door was heavy and clumsy for employees to open and close, and did not latch to close properly.

D&DT Solutions

Dynaco high speed roll up doors were used to replace the old doors. These open and close at 62" per second which reduces energy loss without slowing traffic.

SOLUTIONS PROVIDED:

1. The new staging freezer door incorporates a heated air curtain to reduce frost buildup on the curtain.
2. All doors utilize either wireless pull cords or motion detectors to keep the traffic flow moving.

“ Dock & Door has been a great partner in meeting our warehouse facility needs. Brian was fantastic to work with and was attentive and understanding to our unique challenges. The whole team made the process easy, and each part was well communicated. I look forward to working with them in the future.”
